

Process and Technology Consulting

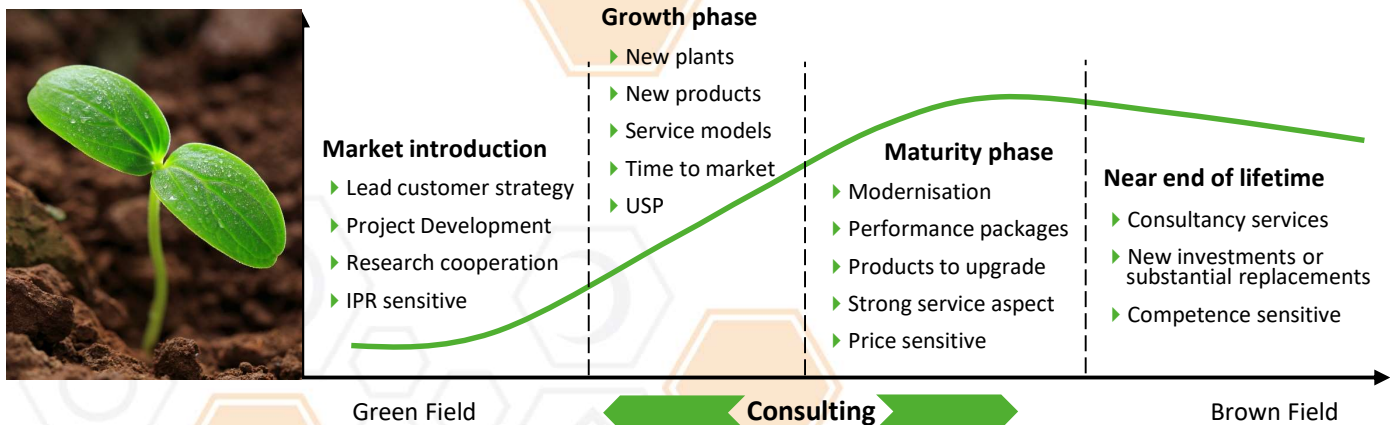

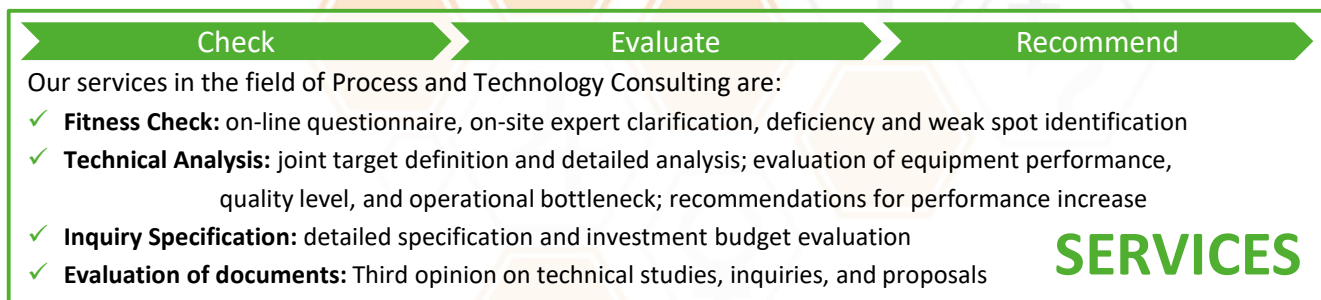

Competence in Recycling & E-waste Processing

- ✓ Objective recommendations
 - ✓ Disburden the on-site staff
 - ✓ In depth expertise and analysis
 - ✓ Obtaining an in depth basis for decision making
 - ✓ Trustful cooperation
 - ✓ Estimate and state CAPEX & OPEX
- BENEFIT**

It is not sufficient to know that something will occur – we need to know when and why. It is essential to understand the background of a process and raise awareness for the fundamental influences and interrelationships.

Listening to and understanding **customers' challenges** is the **basis** for fruitful and profitable cooperation. Sometimes it is important to get an outside view from an independent consultant, not caught up in daily work **routine**. Our objective approach is to discover **sustainable solutions and improvements** for you and your business – starting from small optimisation **projects**, up to complete process and facilities re-design.

We are the ideal partner for:

- ✓ Project development including technical, economical, and financial evaluation
- ✓ Both integration of single technologies and complete Greenfield projects
- ✓ Tuning and modification of plants, as well as cost and quality optimization

"... positioning the client in the market through technology, products, capacities in a competitive environment regional and global to increase margins ..."
