

# Process and Technology Consulting

## Competence in Recycling & E-waste Processing

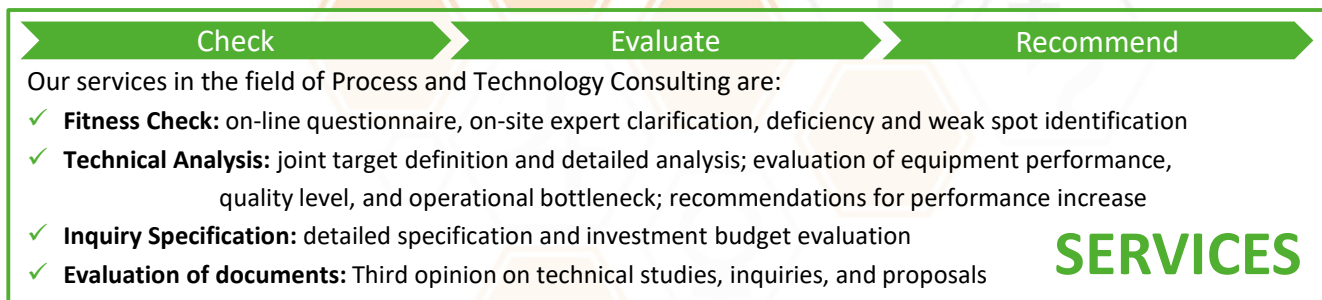

**UrbanGold**  
recycling for a green future

- ✓ Objective recommendations
- ✓ Disburden the on-site staff
- ✓ In depth expertise and analysis
- ✓ Obtaining an in depth basis for decision making
- ✓ Trustful cooperation
- ✓ Estimate and state CAPEX & OPEX

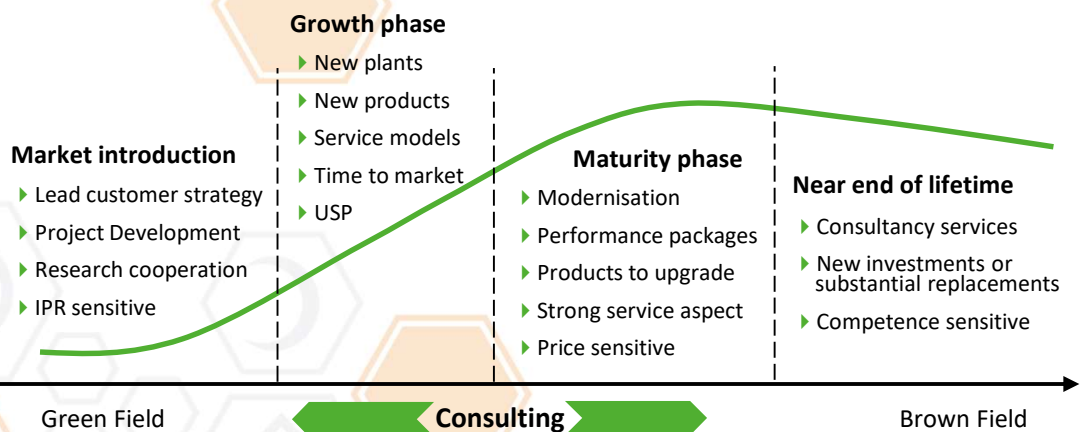

**BENEFIT**

It is not sufficient to know that something will occur – we need to know when and why. It is essential to understand the background of a process and raise awareness for the fundamental influences and interrelationships.

Listening to and understanding **customers' challenges** is the basis for fruitful and profitable cooperation. Sometimes it is important to get an outside view from an independent consultant, not caught up in daily work routine. Our objective approach is to discover **sustainable solutions and improvements** for you and your business – starting from small optimisation projects, up to complete process and facilities re-design.

**SERVICES**

We are the ideal partner for:

- ✓ Project development including technical, economical, and financial evaluation
- ✓ Both integration of single technologies and complete Greenfield projects
- ✓ Tuning and modification of plants, as well as cost and quality optimization

*"... positioning the client in the market through technology, products, capacities in a competitive environment regional and global to increase margins ..."*
